

MISSISSIPPI STATE DEPARTMENT OF HEALTH

BUREAU OF PUBLIC WATER SUPPLY

CALENDAR YEAR 2009 CONSUMER CONFIDENCE REPORT CERTIFICATION FORM

List PWS ID #s for all Water Systems Covered by this CCR

0140033

Public Water Supply Name

	ederal Safe Drinking Water Act requires each <i>community</i> public water system to develop and distribute a consumer ence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR is mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.							
Please	Answer the Following Questions Regarding the Consumer Confidence Report							
$\Box \mathbf{X}$	Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)							
	Advertisement in local paper On water bills Other							
	Date customers were informed: 6 /16/2010							
	CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:							
	Date Mailed/Distributed:/_/							
X	CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)							
	Name of Newspaper: Clarksdale Press Register							
	Date Published: 6/16/2010							
X	CCR was posted in public places. (Attach list of locations) Moore's Dorm, Friends Hall, McLaurin Dorm Date Posted: 6/18 2010 Dickerson-Johnson Library, Business Office, Curry Hall							
Ē.	Date Posted: 6/18/2010 Dickerson-Johnson Library, Business Office, Curry Hall Whiteside Hall, Allied Health, Skill Tech CCR was posted on a publicly accessible internet site at the address: www							
CERTI	FICATION							
onsiste	certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in and manner identified above. I further certify that the information included in this CCR is true and correct and is not with the water quality monitoring data provided to the public water system officials by the Mississippi State ment of Health, Bureau of Public Water Supply.							
Dr. Vi Vame/	vian President Vivian M. President (18/2010 Title (President, Mayor, Owner, etc.)							
	Mail Completed Form to: Bureau of Public Water Supply/P.O. Box 1700/Jackson, MS 39215 Phone: 601-576-7518							

570 East Woodrow Wilson • Post Office Box 1700 • Jackson, Mississippi 39215-1700 601/576-7634 • Fax 601/576-7931 • www.HealthyMS.com

RECEIVED - WATER SUPPL

Coahoma Community College PWS ID#0140033 2009 Consumer Confidence Report

2010 JUN -4 PM12: 57

Is my water safe?

Last year, as in years past, your tap water met all U.S. Environmental Protection Agency (EPA) and state drinking water health standards. Local Water vigilantly safeguards its water supplies and once again we are proud to report that our system has not violated a maximum contaminant level or any other water quality standard.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from?

We purchase our water from the Clarksdale Public Utilities. This water is drawn from the Sparta Sand Aquifer and the Meridian-Upper Wilcox Aquifer.

Consumer Confidence Report, Source water assessment and its availability

Coahoma Community College purchases water from the Clarksdale Public Utilities.

The Source Water Assessment for Clarksdale Public Utilities is available at this time. A copy of the assessment is maintained at the main office of Clarksdale Public Utilities at 416 Third Street for public review during normal business hours. Clarksdale Public Utilities wells were ranked lower to moderate in terms of susceptibility to contamination.

The Consumer Confidence Report for Coahoma Community College will not be mailed to the water system customers. However, a copy of the Coahoma Community College Consumer Confidence Report is is maintained at the office of Milroy Harris, Coahoma Community College for public review during normal business hours. Please contact Milroy Harris at 662-621-4282.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity: microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses; organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

How can I get involved?

If you have any questions about this report or concerning your water utility, please contact Jerone Shaw at 662-621-4085. We want our valued customers to be informed about their water.

Water Conservation Tips

Did you know that the average U.S. household uses approximately 400 gallons of water per day or 100 gallons per person per day? Luckily, there are many low-cost and no-cost ways to conserve water. Small changes can make a big difference – try one today and soon it will become second nature.

- Take short showers a 5 minute shower uses 4 to 5 gallons of water compared to up to 50 gallons for a bath.
- Shut off water while brushing your teeth, washing your hair and shaving and save up to 500 gallons a month.
- Use a water-efficient showerhead. They're inexpensive, easy to install, and can save you up to 750 gallons a month.
- Run your clothes washer and dishwasher only when they are full. You can save up to 1,000 gallons a month.
- Water plants only when necessary.
- Fix leaky toilets and faucets. Faucet washers are inexpensive and take only a few minutes to replace. To check your toilet for a leak, place a few drops of food coloring in the tank and wait. If it seeps into the toilet bowl without flushing, you have a leak. Fixing it or replacing it with a new, more efficient model can save up to 1,000 gallons a month.
- Adjust sprinklers so only your lawn is watered. Apply water only as fast as the soil can absorb it and during the cooler parts of the day to reduce evaporation.
- Teach your kids about water conservation to ensure a future generation that uses water wisely. Make it a family effort to reduce next month's water bill!
- Visit <u>www.epa.gov/watersense</u> for more information.

Source Water Protection Tips

Protection of drinking water is everyone's responsibility. You can help protect your community's drinking water source in several ways:

- Eliminate excess use of lawn and garden fertilizers and pesticides they contain hazardous chemicals that can reach your drinking water
- Pick up after your pets.
- If you have your own septic system, properly maintain your system to reduce leaching to water sources or consider connecting to a public
- Dispose of chemicals properly; take used motor oil to a recycling center.
- Volunteer in your community. Find a watershed or wellhead protection organization in your community and volunteer to help. If there are no active groups, consider starting one. Use EPA's Adopt Your Watershed to locate groups in your community, or visit the Watershed Information Network's How to Start a Watershed Team.
- Organize a storm drain stenciling project with your local government or water supplier. Stencil a message next to the street drain reminding people "Dump No Waste - Drains to River" or "Protect Your Water." Produce and distribute a flyer for households to remind residents that storm drains dump directly into your local water body.

Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Coahoma Community College is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Water Quality Data Table

The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. The presence of contaminants in the water does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently.

<u>Contaminants</u>	MCLG or <u>MRDLG</u>	MCL, TT, or MRDL	Your	:1	ange	Sample <u>Date</u>	<u>Violation</u>	Typical Source
Disinfectants & Disinfectant By-	Products							
(There is convincing evidence that	addition of	a disinfe	ectant is i	necess	ary for c	ontrol of n	nicrobial co	ontaminants)
(ppb)	NA	80	26.42	NA		2009	No	By-product of drinking water disinfection
Haloacetic Acids (HAA5) (ppb)	NA	60	10	NA	<u> </u>	2009	No	By-product of drinking water chlorination
Chlorine (as Cl2) (ppm)	4	4	0.78	0.7	0.78	2009	No	Water additive used to control microbe
Inorganic Contaminants	T T	ar na nasan 1945 na 1946 Marana						
Antimony (ppb)	6	6	0.5	0.5	0.5	2008	No	Discharge from petroleum refineries; fire retardants; ceramics; electronics; solder; test addition.
Arsenic (ppb)	0	10	5	1.212	5	2008	No	Erosion of natural deposits; Runoff fror orchards; Runoff from glass and electronics production wastes
Barium (ppm)	2	2	0.10201 4	0.011 056	0.1020 14	2008	No	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natura deposits
Beryllium (ppb)	4	4	0.1	0.1	0.1	2008	No	Discharge from metal refineries and coal-burning factories; Discharge from electrical, aerospace, and defense industries
Chromium (ppb)	100	100	0.5	0.5	0.5	2008	No	Discharge from steel and pulp mills; Erosion of natural deposits
luoride (ppm)	4	4	0.559	0.173	0.559	2008	No	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories
Mercury [Inorganic] (ppb)	2	2	0.2	0.2	0.2	2008	No 1	Erosion of natural deposits; Discharge from refineries and factories; Runoff from landfills; Runoff from cropland
elenium (ppb)	50	50	5.235	0.761	5.235	2008	No r	Discharge from petroleum and metal refineries; Erosion of natural deposits; Discharge from mines

Inorganic Contaminants Copper - action level at consumer taps (ppm) Lead - action level at consumer	1.3	1.3	0.3	200		0		No	Corrosion of household plumbing systems; Erosion of natural deposits Corrosion of household plumbing	
<u>Contaminants</u>	MCLG	<u>AL</u>	Your <u>Water</u>	Samı <u>Dat</u>	- t	# Sample xceeding		Exceed:	Typical Source	
Radium (combined 226/228)	0	5	0.824	0	0.824				Prosion of natural deposits	
Alpha emitters (pCi/L)	0	15	2.28	0.037	2.28	2008			Erosion of natural deposits	
Uranium (ug/L)	0	30	0.156	0.001	0.156	2008		No I	Erosion of natural deposits	
Radioactive Contaminants								بر ا	actories	
Cyanide [as Free Cn] (ppb)	200	200	5	5	5	2008		No 1	Discharge from plastic and fertilizer factories; Discharge from steel/metal factories	
Thallium (ppb)	0.5	2	0.5	0.5	0.5	2008		No	Discharge from electronics, glass, and Leaching from ore-processing sites; drug factories	

<u>Term</u>	Definition
ug/L	ug/L: Number of micrograms of substance in one liter of water
ppm	ppm: parts per million, or milligrams per liter (mg/L)
ppb	ppb: parts per billion, or micrograms per liter (μg/L)
pCi/L	pCi/L: picocuries per liter (a measure of radioactivity)
NA	NA: not applicable
ND	ND: Not detected
NR	NR: Monitoring not required, but recommended.

Term	Definition							
MCLG	MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.							
MCL	MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.							
TT	TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.							
AL	AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.							
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.							
MRDLG	MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.							
MRDL	MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.							
MNR	MNR: Monitored Not Regulated							
	MPL: State Assigned Maximum Permissible Level
